

Featured container modification

Tanson Builders - Boxman Group completed this modification in November of 2007 at our Christchurch depot.

Tanson Builders

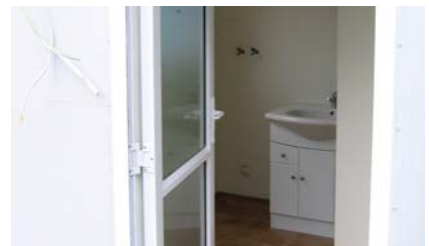

The brief from the client was to provide two compact sanitary/toiletry units for workers on building sites.

The 2 x 12G1 (3.1m long) new containers provided a floor space of 6.4m² each, which doesn't sound like much, however:

In each unit we were able to include a wash basin, a toilet and a shower, with lighting and an extractor fan.

The units were fitted out with Pink Batts insulation on the walls and ceiling behind a "wet wall" interior lining.

All electrical wiring and plumbing work was hidden behind the wall lining, and the floor was linoleum.
