About this container

The 12.2m (40ft) long ISO Flatrack is a special container designed to provide maximum flexibility for cargo loading and is primarily used for break-bulk, over-width or over-height cargo on container ships.

They come in a variety of makes and models from fixed end, folding, flush folding, solid ends or posts to name the most common.

Once retired out of shipping we find their most common use domestically is as bridges or support frames.

For ease of display, we have featured the most commonly available unit, the Flush-Folding flatrack.

Pricing of used containers varies according to grade and market supply parameters.

Boxman containers

The vast majority of Boxman used containers are still perfectly serviceable, they have simply been retired out of shipping through the natural renewal cycle that occurs in the shipping industry.

At Boxman we believe our best attribute is providing value for money in matching our customers with the container that best suits their overall needs, taking into account budget, timing and any specific requirements.

At Boxman we strive to purchase the best quality containers we can. Consequently, since we began operations in 1990, Boxman has garnered a reputation for supplying the

highest quality second hand container equipment available in the used market.

We offer a refurbishment service, whereby B through to A grade equipment can be cleaned down and repainted according to the customers requirements.

Container features

Unlike the majority of containers, the Flatrack provides no protection from the elements for your goods/cargo. Nor are they lockable in any way. For cargo that is sensitive to the elements, good wrapping or a tarpaulin is essential.

Rather they provide a solid base to which to secure cargo to via cargo lashing rods on the side rails. The end walls provide some protection from impact damage. For over-length cargo one or both end walls can be folded down flush with the floor allowing the cargo to be stowed accordingly. Flush folding also allows empty units to be stacked together to make a module for repositioning, normally 4 Flatracks can be stacked to create the equivalent size of 1 x 12.2m long standard container.

Due to the nature of the types of cargo they hold, Flatracks are as a general rule rated to a higher maximum gross weight than standard containers.

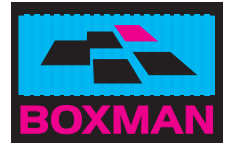

We believe that our grading system allows for the best possible value for money proposition in the industry with quality ranging from Food Grade to Industrial purposes and everywhere in between.

Boxman can also provide a re-certification service so that used containers can be CSC Plated to allow for coastal and international shipping.
